

Abstract

A surgical instrument assembly includes an inserter instrument and a driving instrument to engage an implant to a bony structure in a patient. The inserter instrument is positionable in a patient with the implant engaged thereto to position the implant at an operative site in the patient. A driving instrument is engageable to the inserter instrument to engage the implant to bony structure at the operative site. A template is provided and engageable by the driving instrument to facilitate preparation of the bony structure to receive the implant
